ONLY**

Representative Before / After Examples

Representative frames were selected from different points in the video to demonstrate face anonymization under low-light, dense urban traffic, occlusion, motion blur, and mixed viewing distances.

Primary demonstration — 00:08

Close-range riders and visible faces under low-light traffic conditions. This frame provides the clearest visual comparison of the face-only anonymization result.

BEFORE

AFTER — FACE ANONYMIZATION

Additional representative frames

00:03

Early dense-traffic scene with multiple visible road users.

BEFORE

AFTER

00:08

Close-range faces demonstrating clear anonymization coverage.

BEFORE

AFTER

00:30

Mid-video urban scene with mixed-distance faces and moving traffic.

BEFORE

AFTER

01:01

Later low-light scene containing partial occlusion and complex traffic.

Evaluation context

Pipeline	v55-p0-face-only
Location	Dhaka, Bangladesh
Environment	Low-light dense urban traffic
Reviewer note	Human QA is recommended for very small, occluded, low-light, or motion-blurred faces.

Responsible reporting

This is an internal engineering evaluation, not an independently audited accuracy benchmark. Final production delivery should include Human QA for difficult scenes.
